

Connect fiber optic internet device

Overview

By now, you ought to be frothing at the mouth to ditch your old internet and get a fiber optic network installed. Here are the literal steps to upgrade your home network to fiber. 1. Find an ISP that offers fiber service to your address. Remember that fiber is only available to about 25% of the US. If it turns out you don't have access, you'll have to wait for infrastructure. Fiber is considered to be both the present and future of broadband internet. It's the present because already around one-fourth of US internet users have access to it. It's the future because it is a completely new redesign requiring a unique infrastructure different from what has been before. The materials used and the way they work seem almost identical. You'll need equipment, tools, and specific knowledge to set up an in-home fiber optic network. Luckily, your ISP will do the heavy lifting of getting the signal to your home or business. That's where you'll take over. From the preceding discussion, it should be evident that if you have access to fiber internet in your area- get it. It's faster, more reliable, and yields higher performance in every way. Right now, the cost might be a little higher than other internet types but should drop as more infrastructure is laid and more subscribers come on board. In general,
