A distribution box, or DB box, is a circuit breaker enclosure. It is a vital part and central hub of any electrical system. The hub distributes electrical power from a single input source to various circuits throughout a building. Electricians and repair teams use these diagrams to fix problems. Diagrams help you follow safety rules and keep things neat. It receives a single, high-amperage power feed and divides it into multiple. Distribution boxes, often called breaker boxes or fuse boxes, are basically the central hub where electricity from your main supply gets divided into different circuits.
