

# Drilling holes for cable tray wiring

## Overview

Drilling Holes for splice plates must be drilled in field-cut cable trays. At Prime Cut Diamond Drilling, we support electricians, M&E contractors, and containment specialists by providing clean, accurate penetrations exactly where needed. But just as important as the hole itself is making sure it's done in line with fire safety regulations and cable containment. - The steps for installing cable trays, which include marking, cutting, drilling holes, installing supports, and fixing fittings and accessories. - Common tools used for cable tray installation like saws, drills, wrenches, and levels. A short piece of side rail that is punched with the standard factory hole pattern can be bolted to maintain spacing or to keep cables in place when the tray is set the minimum bend radius for cables as they exit the bottom of the cable tray. Structural building members should never be cut, and cable trays should not be installed in hoist way or where subject to physical. But before you lay the first tray or clamp down a single cable, you need a solid plan. This guide breaks down the process step by step.
