

Fiberglass Cable Tray Solution

Overview

Fiberglass Cable Tray is a durable, corrosion-resistant system used to support and organize electrical cables in industrial, commercial, and infrastructure projects. Made from fiberglass-reinforced plastic (FRP), it offers superior strength, lightweight design, and resistance to harsh environmental conditions. The FRP Cable Tray is a cable support system made of Fiberglass Reinforced Plastic (FRP for short). It is formed by the composite molding of glass fiber and matrix materials such as epoxy resin. The market is projected to reach USD 878.8 million in 2025 and is projected to reach USD 878.8 million in 2034, with a CAGR of 8% during the forecast period (2024-2034). This robust growth is being driven by rapid urbanization. Our Wire Mesh Cable Trays, precision-engineered from welded steel wire with 24 years of research and over 76,000 miles worldwide, handle everything from oil-rig power routes to data-center cabling. GangLong Fiberglass offers a range of cable-management solutions—stainless steel, aluminum, and FRP. A fiberglass cable tray, also called an FRP cable tray or cable bridge in some regions, is a structural support system used to route and protect electrical and instrumentation cables.
