An eSFP module is an SFP module that supports monitoring of voltage, temperature, bias current, transmit optical power, and receive optical power. Therefore, eSFP is also called SFP sometimes. Its primary function entails converting electrical signals into optical signals. This assembly comprises a light source, such as a laser diode or a semiconductor light-emitting diode (LED), an optical interface, a. oltage and the bias current. If one of the five parameters is abnormal, ONU registration will be abnormal or packet nt are all for the PON port. Copyright © Huawei Technologies Co.
