

Is it necessary to buy a gigabit router for a 200Mbps fiber optic connection

Overview

You don't need a special router, per se, but you do need one that can handle the speed fiber provides. If you're paying for gigabit fiber service, make sure your router supports at least gigabit Ethernet ports and dual-band or tri-band WiFi (like WiFi 5 or WiFi 6). Get ready to understand your network's needs. Is Your Current Router Compatible. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. The short answer is no, you don't necessarily need a special router for fiber optic internet. Most modern routers are capable of handling fiber optic internet speeds, but they. I use a router (TP-Link Archer C20) as an AP since the signal from the main modem is not strong enough to reach my room. Routers designed for DSL (which uses phone line inputs) or cable (which uses coaxial inputs) won't work.
