

Kenya Special Metals Spectrometer

Overview

□Powerful 50kV X-ray tube with 6 automated filters for accurate results on metals, alloys, and more. □High sensitivity Si-PIN diode detector provides fast and precise elemental identification. □Advanced Peltier cooling maintains probe temperature at -35°C for stable operation. An optical instrument for measuring the absorption of light by chemical substances, typically it will plot a graph of absorption versus wavelength or frequency and the patterns produced are used to identify the substances present and their internal structure. Copyright © Kens Metal. Our global network of state-of-the-art food laboratories use Inductively Coupled Plasma, which can be coupled with a Mass Spectrometer (ICP-MS). We also use the atomic absorption spectrometer (AAS) and can measure inorganic or organic heavy metals using High Performance Liquid Chromatography (HPLC). Lasany International takes pride in offering a diverse range of state-of-the-art spectrometers designed to meet the varied needs of researchers and scientists. Our spectrometer selection combines precision, reliability, and advanced technology to ensure accurate and efficient analytical results. Lab Product Specification for Teaching and Training Tenders of Spectrometer ISAM Kenya is a Kenyan-based manufacturer and B2B tender supplier of Spectrometer and a complete range of laboratory, school science, TVET and engineering training equipment. Our Kenyan production facilities ship directly. Aditya Systems has established its reputation in the domain and run under the brand name of LADA.
