

New electrical distribution box added to home

Overview

A typical home replacement for a 100-125A indoor panel runs about \$1,200-\$2,500 in parts and labor; a 200A outdoor upgrade with new meter socket can reach \$3,000-\$6,000. Assumptions: standard conduit routing, existing wiring reachable within 10-30 feet, and a single dwelling. Whether in your own home, in a rented apartment or in a business, the distribution box is a central element of every electrical system. Despite this, it often ekes out an inconspicuous existence in the basement or utility room until something stops working properly or an extension becomes. To choose a home distribution box, you must count your circuits and add 30% spare space. Then, select a main switch that handles your total load. Finally, choose safety devices like RCBOs and Surge Protection Devices (SPD) for the best protection against faults and lightning. Covers wiring, placement, standards, and expert tips for a compliant setup. A distribution box, also known as a distribution board, electrical panel, or breaker box, is an enclosure that houses electrical components responsible for distributing electricity throughout a building. It receives power from the main electrical supply and divides it into separate circuits, each.
