

# PLC splitter low loss and performance comparison how to choose one

## Overview

Complete guide to selecting the right PLC splitter for your FTTH or PON network. Covers PLC vs FBT, split ratios (1x4/1x8/1x16/1x32/1x64), package types, insertion loss, and selection tips. What Is a PLC Splitter?

A PLC (Planar Lightwave Circuit) splitter is a passive optical device manufactured. FBT splitters, based on fused fiber tapering, offer simplicity and affordability, while PLC splitters, fabricated using waveguide lithography on silica substrates, prioritize precision and uniformity. This professional analysis compares FBT and PLC splitters across performance metrics—such as. Industry experts often talk about how crucial it is to choose the right type of PLC splitter based on what your network needs. They are also great for steady performance and reliability. It plays a vital role in FTTH (Fiber to the Home) and PON (Passive Optical Network) applications, enabling one input fiber to be.
