

Powerless Communication Systems

Overview

University of Washington engineers have created a new wireless communication system that allows devices to interact with each other without relying on batteries or wires for power. They exchange information by reflecting or absorbing pre-existing radio signals. Professor Adam Grant, organizational psychologist and the youngest tenured professor at Wharton and author of the New York Times bestseller, "Give and Take", has researched people who inspire love and trust, who lead with an unbeatable mix of empathy and competence, and others who appear insecure. But are you able to communicate beyond earshot without cell or internet connectivity?

" I think they're trying to signal power, but these linguistic bids for dominance never fill me with respect. In recent years, 3GPP have standardized series of technologies on IoT (Internet of Things), which achieves the design targets of low cost, low power consumption, massive connection and deep coverage. Questions work especially well when the audience is already skeptical of your influence - times when you lack credibility or status.
