Overview

Main Switch: This switch controls all electricity coming into the box. **Busbar:** A metal strip spreads power to each circuit. A distribution box, also known as a distribution board, electrical panel, or breaker box, is an enclosure that houses electrical components responsible for distributing electricity throughout a building. It receives power from the main electrical supply and divides it into separate circuits, each. A distribution box uses MCBs, RCDs, and busbars to protect circuits, prevent shocks, and ensure safe power distribution in homes and buildings. **Main Distribution Board (MDB) 2.** This switch cabinet is the incoming cabinet **Composition:** vacuum circuit breaker, disconnecter, three groups of three coil current transformers, lightning arrester, live display, voltage transformer, conductor and other components **Incoming cabinet Function:** the main function is to distribute. A distribution box, often simply called a DB, is a crucial component in any electrical installation.
