

Switch optical module plug

Overview

An SFP (Small Form-factor Pluggable) is a compact, hot-pluggable transceiver module that allows networking equipment — including switches, routers, servers, and media converters — to support different physical media, such as optical fiber or copper, without replacing the host. An SFP (Small Form-factor Pluggable) is a compact, hot-pluggable transceiver module that allows networking equipment — including switches, routers, servers, and media converters — to support different physical media, such as optical fiber or copper, without replacing the host. We offer a large range of LXI Ethernet and PXI & PXIe optical switching solutions which include 1x2, 2x2, 1x4 and 1x8 configurations, and our switch modules are available with a wide choice of connectors, including FC/APC, FC/PC, SC/PC, MU (Mini SI) and LC. This modular. Optical transceivers are compact, hot-pluggable devices that convert electrical signals into optical signals, enabling high-speed data transmission across switches, routers, and other networking equipment. Never look directly into an optical module or the ends of optical fibers.
