

Temporary distribution box wire colors

Overview

The mandatory colors for power wiring in the National Electrical Code (NEC) are Green, Bare, or Green/Yellow (a yellow stripe or band on green) for the protective ground (PG), and White (or alternatively Gray) for the neutral wire. The IEC 60446 standard, "Basic and Safety Principles for Man-Machine Interface, Marking, and Identification," establishes global guidelines for identifying electrical equipment terminals, conductors, and wiring colors. Engineered utilizing the latest in GFCI technology, Southwire's iconic yellow temporary power boxes have been providing contractors, electricians, and engineers with the highest level of electrical safety for over 35 years. These color codes are used for electrical distribution systems, and while some are. Electrical wiring color coding assigns specific colors to each wire, enabling technicians to quickly identify its function, thereby ensuring safety, reducing maintenance time, and preventing wiring errors. It typically transports around 120 or 230VAC, depending on the region.
