

What equipment is included in a standard network cabinet

Overview

In 2025, a network cabinet is a standardized, enclosed structure (typically 19-inch wide) designed to securely house, organize, protect, power, and cool active and passive network equipment such as switches, routers, patch panels, and firewalls. A complete network cabinet package needs power management tools, cooling solutions, cable organization systems, security features, and monitoring equipment. Together, these reduce downtime by 18% and keep your IT infrastructure running smoothly. Let's explore each category in detail. Typically made of sturdy steel (sometimes aluminum), a Network Cabinet, often interchangeably called a server rack, is a physical frame or enclosure designed to house and organize various types of network hardware and accessories. "Such enclosures assist you in systematizing as well as securing the crucial elements of a network infrastructure in a safe, secure, and efficient way."
