

# What is a CP optical cable

## Overview

CP-AOCH/PF cable is a pure fiber high-speed HDMI active optical cable (AOC) designed with heavy-duty durability perfectly suited for the medical and sensitive EMI applications. CP-AOCH/PF supports resolutions up to 4K@60 (4:4:4) 18 Gbps over long cable runs up to 100 meters. Co-Packaged Optics (CPO) is a technology and design approach where optical components, such as lasers and photodetectors, are integrated alongside electrical components, like Application-Specific Integrated Circuits (ASICs), within the same package. This integration significantly reduces the LPOs, which remove onboard digital signal processors, consume significantly less power than traditional pluggable optics, typically 30 to 50% less. Check out my post for more details. Andy's main argument is that the power efficiency of LPOs and CPOs is roughly comparable, at least for the 1600G. There are different types of fiber optic cables because each type is optimized for specific applications that have unique requirements for bandwidth, transmission distance, and environmental factors. CP-AOCH/UF is thinner, lighter and more flexible than most of the copper or even standard optical cables. Unlike copper wires, which are limited by lower data transmission speeds, shorter transmission distances, and higher susceptibility to electromagnetic interference, fiber optic cables offer unparalleled performance and can.
